General Information

Plan Report ID Number: [For ONC-Authorized Certification Body use only]

Developer Name: athenahealth, Inc

Product Name(s): athenaFlow

Version Number(s): v23

Certified Health IT: ONC Certification for Health IT

Product List (CHPL) ID(s): 15.04.04.2880.flow.23.06.1.230403

Developer Real World Testing Page URL: <https://www.athenahealth.com/onc-certified-health-it>

Justification for Real World Testing approach

At this time, athenaFlow v23 are Certified electronic health records (EHR) that is sold to primary care, specialty and multi-specialty ambulatory groups. Functionality within the EHR greatly overlaps regardless of care setting, but the Real World Testing plan aims to incorporate data from as diverse a set of these settings as is possible.

As all of the certification criteria apply broadly to the care settings noted above, the Real World Testing plan will incorporate several certification criteria into one plan:

- §170.315(b)(1) – Transitions of Care
- §170.315(b)(2) – Clinical Information Reconciliation and Incorporation
- §170.315(b)(3) – Electronic Prescribing
- §170.315(b)(9) – Care Plan
- §170.315(b)(10) - Electronic Health Information Export
- §170.315(c)(1) – CQMs – Record and Export
- §170.315(c)(2) – CQMs – Import and Calculate
- §170.315(c)(3) – CQMs – Report
- §170.315(e)(1) – View, Download, and Transmit to 3rd Party
- §170.315(f)(1) – Transmission to Public Health Agencies – Immunization Registry
- §170.315(f)(2) – Transmission to Public Health Agencies – Syndromic Surveillance
- §170.315(f)(5) - Transmission to Public Health Agencies - Electronic Case Reporting
- §170.315(g)(7) – Application Access – Patient Selection
- §170.315(g)(9) – Application Access – All Data Request
- §170.315(g)(10) – Standardized API for patient and population services
- §170.315(h)(1) – Direct Project

Standards Updates (SVAP and USCDI)

Standard (and version)	All standards versions are as specified in ONC Certification for Health IT except for: §170.315(c)(3) – CQMs – Report CMS Implementation Guide for Quality Reporting Document Architecture Category III Eligible Clinicians Programs; Implementation Guide for 2024
Date of ONC-ACB notification (SVAP or USCDI)	January 2025 (next quarterly attestation)
Date of customer notification (SVAP only)	July 25, 2024
USCDI-updated criteria	Not applicable

Care Setting(s)

See summary of supported care settings listed in the “Justification for Real World Testing Approach” section.

Overall Expected Outcomes

- Real World Testing will demonstrate that the EHR is conformant to the criteria listed in the “Justification for Real World Testing” section.
- See below for measures and outcomes associated with the use cases associated with the listed certification criteria.

Measure Used

Use Case 1 – During the course of ambulatory care, providers share patient records (CCDAs) with each other and where appropriate, reconcile key clinical data elements into the chart.

Certification Criteria	Requirement
§ 170.315 (b)(1) Transition of care	(i) Send and receive via edge protocol...
	(ii) Validate and display...
	(iii) Create...
§ 170.315 (b)(2) Clinical information reconciliation and incorporation	(i) General requirements...
	(iii) Reconciliation...
§ 170.315 (b)(9) Care plan	Enable a user to record, change, access, create, and receive care plan information in accordance with the Care Plan document template...
§ 170.315 (g)(6) Consolidated CDA creation performance	(i) Reference C-CDA match..
	(ii) Document-template conformance...
	(iii) Vocabulary conformance...
	(iv) Completeness verification...
§ 170.315 (h)(1) Direct project	(i) Applicability Statement for Secure Health Transport...
	(ii) Delivery Notification in Direct

For each measure below, test will ensure use of relevant relied upon software including:

- Medical Office Technologies ezAccess Patient Portal
- Medical Office Technologies ezAccess Direct Messaging
- Qvera Interface Engine
- MedAllies HISP

Measure 1: Create and send a CCDA: This measure will evaluate the creation and sending of required CCDAs at scale across many providers using athenaFlow in a live production environment.

- Justification: A statistically significant sample size of CCDAs generated and sent by athenaFlow spanning multiple organizations with expected errors will validate successful use in the real world.
- Test Methodology: System logs will be evaluated for the required types of CCDAs that were created and sent.
- Expected Outcomes: Success is defined as CCDAs of the required types successfully being created and sent via Direct with expected errors (e.g., invalid direct address, no response from receiver, etc.)

Measure 2: Receive and display a CCDA – This measure will demonstrate EHR ability to receive and display CCDAs in a live production environment.

- Justification: An evaluation of a statistically significant number of CCDAs received by providers using athenaFlow spanning multiple organizations will validate successful use in the real world.
- Test Methodology: System logs will be evaluated to identify CCDAs that were successfully received.
- Expected Outcomes: Success is defined as: CCDAs successfully received via Direct.

Measure 3: Receive and reconcile a CCD – This measure will demonstrate EHR ability to receive and reconcile CCDs in a live production environment.

- **Justification:** An evaluation of reconciliation use spanning a statistically significant number of active users spanning multiple organizations will validate successful use in the real world.
- **Test Methodology:** System logs will be evaluated to determine the number of users that successfully reconcile at least one CCD using CEHRT.
- **Expected Outcomes:** A high number of users successfully use CEHRT to receive and reconcile data into patient charts.

Use Case 2 – During the course of ambulatory care, patients access a copy of their record (CCDs) for viewing, downloading and/or transmitting.

Certification Criteria	Requirement
§ 170.315 (e)(1) View, download, and transmit to 3 rd party	(i) (A) View...
	(i)(B) Download...
	(i)(C) Transmit to third party...
§ 170.315 (h)(1) Direct project	(i) Applicability Statement for Secure Health Transport...
	(ii) Delivery Notification in Direct

For each measure below, test will ensure use of relevant relied upon software including:

- Medical Access Technologies ezAccess Patient Portal
- Medical Access Technologies ezAccess Direct Messaging

Measure 1: Validate user behavior around view actions – This measure will demonstrate the ability for a patient to preview a CCD document template in a live production environment of their patient portal.

- **Justification:** The CCD document template contains all required data elements in § 170.315 (e)(1)(i)(A)
- **Test Methodology:** System logs will be evaluated to identify successful CCD document views in the patient portal.
- **Expected Outcomes:** Success is defined by the number of successful CCD document views.

Measure 2: Validate user behavior around download actions – This measure will demonstrate the ability for a patient to download a CCD document template in a live production environment of their patient portal.

- **Justification:** An evaluation of a statistically significant number of CCD document downloads spanning multiple organizations will demonstrate the successful real-world use of the download feature.
- **Test Methodology:** System logs will be evaluated to identify successful CCD document downloads in the patient portal.
- **Expected Outcomes:** Success is defined by the number of successfully downloaded CCD documents.

Measure 3: Validate user behavior around transmit actions – This measure will demonstrate the ability for a patient to transmit a CCD document template to a third party in a live production environment of their patient portal.

- **Justification:** An evaluation of a statistically significant number of CCD document transmissions spanning multiple organizations will demonstrate the successful real-world use of the transmit feature.
- **Test Methodology:** System logs will be evaluated to identify the volume of successful CCD document transmits in the portal. The analysis will break out use of transmission via either Direct or email.
- **Expected Outcomes:** Success is defined as:
 - CCD documents successfully sent via Direct with expected errors (e.g., invalid Direct address, lack of response, etc.)

- CCD documents successfully sent via email with expected errors (e.g., invalid email address, etc.)

Use Case 3 – EHR users export Electronic Health Information (EHI) for one or many patients for the purpose of sharing with providers, patients or moving bulk data to another EHR.

Certification Criteria	Requirement
§ 170.315 (b)(10) Electronic health information export	(i) General requirements for export summary configuration...
	(ii) Creation...
	(iii) Timeframe configuration...
	(iv) Location configuration...

For each measure below, test will ensure use of relevant relied upon software including:

- Qvera Interface Engine

Measure 1: Single/Multi patient export – This measure will assess functionality used to export EHI for a single patient and multiple patients in a production environment.

- **Justification:** The evaluation of a statistically significant number of exports by users spanning multiple organizations using athenaFlow will demonstrate the real-world utility of the data export.
- **Test Methodology:** System logs will be reviewed to determine the volume of exports generated in various configurations (e.g., single-patient, multi-patient, etc.) and only by authorized users.
- **Expected Outcomes:** Only authorized users will be able to successfully create export summaries and there will be evidence of successful exports using various configurations (e.g., single-patient, multi-patient, etc.)

Use Case 4 – Clinicians electronically prescribe medications.

Certification Criteria	Requirement
§ 170.315 (b)(3) Electronic prescribing	(i)(A) Enable a user to perform the following prescription-related electronic transactions...
	(i)(C) For the following transactions, the technology must be able to receive and transmit the reason for the prescription...

For each measure below, test will ensure use of relevant relied upon software including:

- Dr First Rcopia

Measure 1: Transaction success rates – This measure will evaluate successful use of required eRx transaction types in a production environment.

- **Justification:** A statistically significant sample size of electronic prescriptions spanning multiple organizations using athenaFlow will demonstrate the real-world utility of the feature.
- **Test Methodology:** System logs will be reviewed to determine frequency of errors for each transaction type.
- **Expected Outcomes:** Transactions are successfully delivered with expected errors (e.g., pharmacy does not support electronic transactions) and achieving the following transaction success rates. Data validation errors are prevented, or end user is notified of errors when appropriate:
 - NewRx – 99%
 - RxChange – 90%

- CancelRx – 98%
- RxRenewal – 97%
- RxFill – 100%
- Medication History – 99%

Use Case 5 – EHR users generate QRDA files that comply with the latest specifications for submission to CMS and other quality reporting needs.

Certification Criteria	Requirement
§ 170.315 (c)(1) CQMs – record and export	(i) Record...
	(ii) Export...
§ 170.315 (c)(2) CQMs – import and calculate	(i) Import...
	(ii) Calculate each and every clinical quality measure...
§ 170.315 (c)(3) – report	Enable a user to electronically create a data file for transmission...

Measure 1: eCQM calculation success rates – This measure will validate the correct calculation of implemented eCQMs relative to measure specifications.

- Justification: Using live customer data to validate the accurate calculation of eCQMs is difficult due to the variability of data inputs. A better approach is to have a controlled production-grade environment with known eCQM data inputs that can be regularly run to evaluate the accurate calculation of the eCQMs over time.
- Test Methodology: . We will leverage the end-to-end testing framework for eCQMs using production test cases for each scenario (namely IPP, Denominator, Numerator, Exclusions and Exceptions) and the various workflows which satisfy in EHR.
- Expected Outcomes: Test cases pass with expected errors (e.g., due to known specification gap, etc.)

Measure 2: QRDA file export conformance – This measure will validate successful user generation of QRDA I and QRDA III files using athenaFlow.

- Justification: Evidence of QRDA I and III files generated by athenaFlow spanning multiple organizations will validate successful use in the real world.
- Test Methodology: System logs will be evaluated to determine the count of practices that have created at least one QRDA I/III file.
- Expected Outcomes: Success is defined as evidence of QRDA I/III file generation by users.

Measure 3: QRDA file import conformance – This measure will assess the use of the athenaFlow QRDA I import feature using a QRDA I file created in a different EHR.

- Justification: The ability for athenaFlow to successfully import a QRDA I file generated by a different EHR that is also certified to the CQM criteria will demonstrate the real-world utility of the QRDA I import feature.
- Test Methodology: System logs will be evaluated to determine the count of practices that have imported at least one QRDA I file.
- Expected Outcomes: Success is defined as evidence of QRDA I file import by users.

Use Case 6 – Data is appropriately triggered and submitted to relevant public health agencies.

Certification Criteria	Requirement
	(i) Create immunization information for electronic transmission...

§ 170.315 (f)(1) Transmission to immunization registries	(ii) Enable a user to request, access, and display...
§ 170.315 (f)(2) Transmission to public health agencies – syndromic surveillance	Create syndrome-based public health surveillance information...
§ 170.315 (f)(5) Transmission to public health agencies – electronic case reporting	Create electronic case reporting for reportable conditions

For each measure below, test will ensure use of relevant relied upon software including:

- Qvera Interface Engine

Measure 1: Immunization message success – This measure will evaluate the ability for athenaFlow to submit conformant immunization messages.

- **Justification:** The evaluation of a statistically significant number of immunization messages spanning multiple organizations using athenaFlow will demonstrate the real-world utility of the capability.
- **Test Methodology:** System logs will be evaluated for different message types including administered, historical and forecast query.
- **Expected Outcomes:** Success is defined as (with expected errors including no response from registry, formatting error beyond the scope of CEHRT specification requirements, etc.):
 - Administered vaccines successfully sent to immunization registry.
 - Historical vaccines recorded are successfully sent to immunizations registry.
 - Forecast query requests successfully sent with historical immunizations and forecast returned.

Measure 2: Syndromic surveillance message success – This measure will evaluate the ability for athenaFlow to submit conformant syndromic surveillance messages in the urgent care setting.

- **Justification:** The evaluation of a statistically significant number of syndromic surveillance messages spanning multiple organizations using athenaFlow will demonstrate the real-world utility of the capability. Although these messages apply to urgent care, emergency department and inpatient settings, athenaFlow only serves the urgent care setting.
- **Test Methodology:** System logs will be evaluated for all applicable messages sent to registries.
- **Expected Outcomes:** Success is defined as the successful message submission to and receipt by all actively engaged registries, with expected errors (e.g., no response from registry, formatting error beyond scope of CEHRT specification requirement, etc.)

Measure 3: Electronic case reporting success - This measure will evaluate the ability for athenaFlow to send Case Reporting electronically to public health agencies through the AIMS Platform.

- **Justification:** athenaFlow supports Electronic Case Reporting using the eCR Now application. The evaluation of documents generated and submitted to public health agencies from the eCR Now application will demonstrate the real-world utility of the capability.
- **Test Methodology:** System logs will be evaluated to determine 1) the count of encounters that generate Electronic Initial Case Report (eICR) documents and 2) the number of eICR documents for which a Reportability Response is received from the public health agency.
- **Expected Outcomes:** 1) eICR documents are successfully generated for reportable conditions and 2) successfully received by public health agencies via AIMS platform as acknowledged by Reportability Responses.

Use Case 7 – Independent vendors, as well as athenahealth customers use certified APIs for both patient and provider-oriented use cases.

Certification Criteria	Requirement
------------------------	-------------

§ 170.315 (g)(7) Application access – patient selection	(i) Functional requirement. The technology must be able to receive a request with sufficient information to uniquely identify a patient and return an ID or other token that can be used by an application to subsequently execute requests for that patient's data.
§ 170.315 (g)(9) Application access – all data request	(i) Functional requirements...Respond to an API request to output the patient's data in a CCDA
§170.315(g)(10) Standardized API for Patient and Population Services	(i) Functional requirements...

Measure 1: Request success rate for certified APIs – This measure will evaluate the successful use of all certified APIs under (g)(7), (g)(9) and (g)(10) certification criteria (<https://mydata.athenahealth.com/fhirapidoc>) through the lens of individual transaction requests by request, API Information Source and API Users.

- **Justification:** The evaluation of a statistically significant sample size of API requests in production systems spanning a broad spectrum of API Information Sources demonstrates real-world request volume from external applications. Tracking success and failure rates of our API responses by HTTP response status codes further validates the results of the APIs against real-world use cases. The measures also demonstrate the ability to provide sufficient supporting API documentation to enable external API developers to integrate with athenaFlow.
- **Test Methodology:** Production system logs of external API usage will be reviewed to determine the success rates for the following:
 - (g)(7, 9) - API Requests Served (excluding bulk calls)
 - Numerator: # of successful responses
 - Denominator: Total requests of certified API(s)
 - (g)(10) - API Requests Served (including bulk calls)
 - Numerator: # of successful responses
 - Denominator: Total requests of certified API(s)
 - (g)(7, 9, 10) - Bulk tokens Requests Served
 - Numerator: # of successful responses
 - Denominator: Total token requests
 - (g)(7, 9, 10) – Non-Bulk token Requests Served
 - Numerator: # of successful responses
 - Denominator: Total token requests
 - (g)(7, 9, 10) - API Information Sources with at least one successful response – Validates successful API use spanning current API Information Sources
 - Numerator: Total API Information Sources with at least one successful response
 - Denominator: Total API Information Sources with at least one request
 - (g)(7, 9, 10) API Users with at least one successful response – Validates successful API use spanning current API Users
 - Numerator: Total API Users with at least one successful response
 - Denominator: Total API Users with at least one request
- **Expected Outcomes:** We expect to see performance of >99% on the above measures.

Schedule of key milestones

Key Milestones	Date/Timeframe
Recruitment of organizations that will participate in de-identified data collection	Q2 2025
Start of collection of necessary data as laid out by plan (will vary by measure)	January 2025
End of collection of necessary data as laid out by plan (will vary by measure)	January 2026
Analysis of data (will vary by measure)	On-going 2025
Submit Real World Testing report to ACB	February 2026

Attestation

This Real World Testing plan is complete with all required elements, including measures that address all certification criteria and care settings. All information in this plan is up to date and fully addresses the health IT developer's Real World Testing requirements.
